Introduction

Introduction

Flume-MR Design

Performance Results

Conclusions & Future Work

- Big Data has been adopted by many organizations
- Hadoop is one of the most used frameworks
- Limited performance
 - Redundant memory copies
 - Disk overhead
- Existing alternatives **must rewrite applications**

Introduction

Introduction

Flume-MR Design

Performance Results

Conclusions & Future Work

- Big Data has been adopted by many organizations
- Hadoop is one of the most used frameworks
- Limited performance
 - Redundant memory copies
 - Disk overhead
- Existing alternatives **must rewrite applications**

Our proposal: Flame-MR

- Completely new event-driven architecture
- Transparent performance improvement of Hadoop applications
- In-memory computing
- Overlapping of data movement and computation

Flame-MR Design

Introduction

Flame-MR Design

Performance
Results

Conclusions &
Future Work

Main features

- **Event-driven architecture**
- Efficient memory management
- In-memory sort and merge algorithms
- Support for iterative workloads
- Full compatibility with Hadoop

Testbed configuration

- Evaluations conducted on Amazon EC2
 - 33 i2.4xlarge instances
 - Interconnected via GbE
 - Instance characteristics
 - 2 × 8-core Intel Xeon E5-2670 v2 2.6 GHz
 - 122 GB RAM
 - 4 × 800 GB SSD
- Experiments automated by the Big Data Evaluator tool (BDEv)
 - Configuration of the frameworks
 - Generation of input datasets
 - Collection of results
 - Available at <http://bdev.des.udc.es>

Performance Results

Introduction

Flame-MR Design

Performance
Results

Conclusions &
Future Work

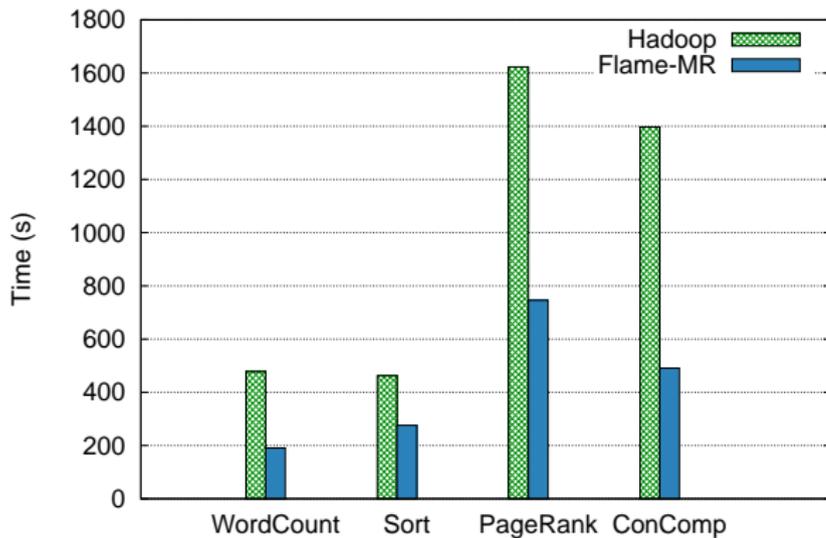

Frameworks

- Hadoop 2.7.2
- Flame-MR 1.0

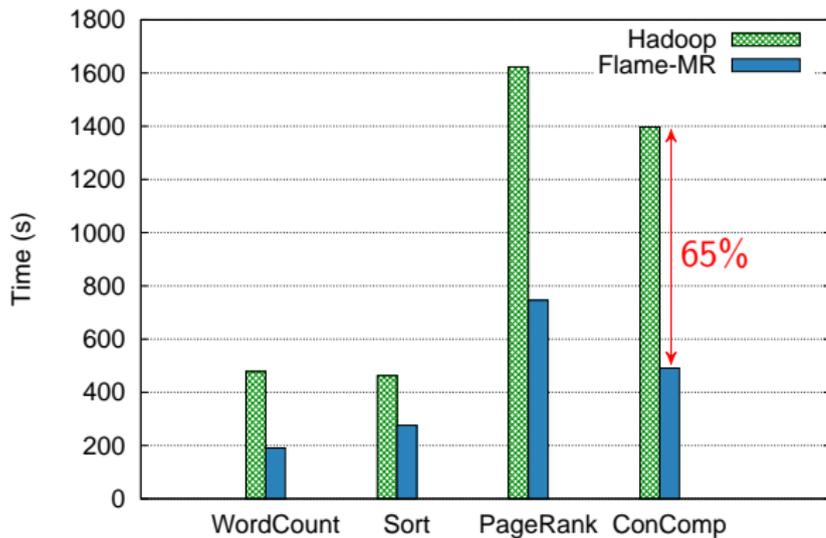

Benchmarks

Benchmark	Characterization	Input data size
WordCount	CPU bound	500 GB
Sort	I/O bound	500 GB
Connected Components	Iterative (5 iter.)	40 GB
PageRank	Iterative (5 iter.)	40 GB

Conclusions & Future Work

Introduction

Flame-MR Design

Performance
Results

Conclusions &
Future Work

Conclusions

- Flame-MR improves transparently the performance of Hadoop
- Results show high performance improvements
 - Up to 65%
- Publicly available at <http://flamemr.des.udc.es>

Future work

- Development of new features
 - Automatic load balancing
- Evaluation of Flame-MR using real-world use cases
